EDUCATION

Bachelor of Science

Computer Science

Texas State University

Aug 2023 - Dec 2025

San Marcos, TX

Awards

National Society of Collegiate
Scholars

Phi Theta Kappa

Dean's List

SKILLS

HTML/CSS

TypeScript

React

Vite

Tailwind CSS

Sass

Figma

VSCode

Vercel

SQL

PostgreSQL

Bash

Git

GitHub

CAREER OBJECTIVE

Software Engineer specializing in building accessible, responsive web applications using HTML, CSS, TypeScript, React, and Tailwind CSS, with a strong focus on WCAG-compliant design. Experience enhancing AI model accuracy and optimizing development workflows through testing and validation, alongside working with relational databases in UNIX-like environments using PostgreSQL, SQL, and Bash. Actively expanding into back-end and full-stack development while continuously refining technical skills and workflow efficiency.

WORK EXPERIENCE

AI Tester and Validation

Stellar AI

January 2025 - current / Remote

- Executed performance and accuracy evaluations on machine learning models using Python, boosting model accuracy by **15%**, and analyzed sample batches to document reproducible scenarios that improved AI-driven GitHub issue resolution speed and accuracy by **20%**.
- Authored detailed technical specifications for **10+ GitHub issues**, enabling AI models to reliably reproduce complex virtualized-environment bugs and streamline automated troubleshooting workflows.

PROJECTS

LoopStudios Landing Page

Programmer

April 2026 - current

- **Live Website:** <https://loop-studios-landing-page-kohl.vercel.app/>
- **GitHub Repository:** <https://github.com/JoshuaM04/LoopStudios-Landing-Page>
- Developed a fully responsive UI with hover/active interaction states, mobile-optimized dropdown behavior, and breakpoint-driven layouts to ensure consistent performance across all screen sizes.
- Implemented dynamic UI features using **React hooks (useState, useEffect)** and **TypeScript**, including a typewriter-style page-load animation and type-safe component rendering to improve reliability and maintainability.

Time Tracking Dashboard

Programmer

April 2026 - current

- **Live Website:** <https://time-tracking-dashboard-zeta-plum.vercel.app/>
- **GitHub Repository:** <https://github.com/JoshuaM04/Time-Tracking-Dashboard>
- Developed a ReactJS dashboard using **useState()** to manage button activation and dynamically render interface boxes based on user selection, with external data imported from a **data.json** file to display relevant hours for 'Daily', 'Weekly', or 'Monthly' selections.
- Created two functions to manage the **activePeriod** state, including a custom component that updates styling based on focus, enabling responsive UI behavior tied to user interaction.
